**Industry Verticals Served**

Financial services, life sciences/healthcare, retail, telecommunications, AgTech, and foodservice industries as well as the non-profit sector.

**Representative Experiences**

- **Cyber-security strategy** – Led team of consultants and client staff through a comprehensive cyber-security strategy and planning engagement for a large ag-tech firm. Output from engagement included a revamped strategy, a governance plan, and a detailed roadmap. Client executive staff have adopted the complete plan for execution and have engaged us to fill leadership role in the implementation.
- **Digital Access Governance Program Management** – Organized and managed start-up of a program governance office for identity and access management systems within a large financial services client. Led client staff in development of roadmap, project oversight, communications planning, issues and risk management, knowledge management, and budget reporting for a multiyear program.
- **Identity and Access Management Transformation** - Led delivery teams in a multi-phased identity and access management program at large retail financial services firm. Managed full strategy and transformation cycle for identity and access management solution.
- **B to C Online Customer Engagement System** - Served as program manager to oversee scoping, planning, functional requirements, system design, build, test, and launch for a large-scale B to C identity and customer profile management implementation for a national restaurant chain.
- **Identity Proofing and Authentication** - Led client relationship and delivery teams in planning and development of large-scale federated identity authentication system for national Telecommunications Company. Assisted client with overall program planning and implementation for system to provide 50M users with secure access to systems across a broad array of healthcare providers and pharmaceutical companies. Led additional teams to integrate service with service provider company systems on behalf of client.
- **Business Process Transformation** - Provided technology strategy and management leadership for large non-profit foundation. Assessed business needs, defined and implemented information and business

process management systems, hired and managed contractors, staff and service providers. Defined and managed the IT charter and budget, to meet agreed upon metrics.

- **Technology Strategy** - Conducted strategic level technology assessment for a large Aquarium. Assessment focused on marketing, operations, maintenance, scientific data and general plant management and administration. Assisted client with defining requirements and driving the search for a CIO.
